Applicant's Response

In Applicant's Response dated 20 January 2005, Applicant amended Claims 1, 4, 13, 16 and 25, cancelled Claims 2, 3, 14 and 15, and argued against all rejections previously set forth in the Office Action dated 20 October 2004.

In light of Applicant's amendment and the following Examiner's Amendment, all rejections are withdrawn.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Forrest Gunnison on 7 February 2005.

Amend the application as follows:

In the Claims:

- Claim 13, Line 1 → ***insert*** the phrase "embodied on a computer-readable medium" between the term "product" and the term "for".

Allowable Subject Matter

Claims 1, 4, 5, 7-13, 16, 17, 19-22, 25 and 26 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1, 13 and 25:

The closest prior art references are Tittel and Martel.

Tittel discloses basic HTML and constructing HTML documents comprising "entities." HTML "entities" are used to add special symbols into a web document. For example, if a web page designer wanted to put the mathematical equation " $x=x^2$ " onto a web document, then he would type "∫2x=x²" into the HTML document. When a browser parses this portion of the HTML code and displays the web page, the following occurs:

- the "∫" portion would be converted into " \int ", because it is included in a text instruction symbol;
- the "²" portion would be converted into "²", because it is included in a text instruction symbol; and
- the "2x" and "x" portions would not be converted, because these portions are not included in a text instruction symbol.

Thus, the entire equation would be displayed as " $\int x=x^2$ " when viewed using a browser.

Martel discloses a basic equation editor within a word processor. The equation editor allows a user to insert a formula into a document. To insert the formula, the user must enter the equation editor, which is a GUI that is **separate** from the word-processing document. Using the equation editor GUI, the user types in a textual

description to generate the equation. For example, the textual description "SQRT x" generates the equation \sqrt{x} . That is, the equation editor converts the text instruction symbol "SQRT" to the square root symbol and does not convert the text character "x" but instead simply enters it into the formula.

The prior art fails to disclose or suggest a word processor with an equation editor that allows the user to interactively enter text into a document that is to be converted into a formula, select said text and convert said text into said formula while remaining within the document. The prior art either requires the user to employ an equation editor in the word processor or does not allow the user to interactively select text for conversion into a formula by highlighting said text.

Claims 4, 5, 7-12, 16, 17, 19-22 and 26:

These claims are dependent upon Claims 1, 13 or 25 and are thus allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
